

Follow these steps to implement the chatting feature and the dashboard update

#1 Add the chatting n8n workflow to your n8n account

Import the third n8n workflow (Chatting_Workflow_n8n) to your n8n account

#2 Write down the webhook url of that workflow

#3 Update the .env file

```
nano /opt/gptsweetheart/.env
```

Add the webhook url of the new n8n workflow to the .env file

```
N8N_CHAT_WEBHOOK_URL=YOUR n8n PRODUCTION WEBHOOK URL
```

#4 Upload the new updated files

Upload app.py, dashboard.html and dashboard.js to your server to the right folders

#5 Restart the app

```
sudo systemctl daemon-reload
```

```
sudo systemctl restart gptsweetheart
```

```
sudo systemctl status gptsweetheart
```
