Stripe Setup (Test Mode)

1. Switch to Test Mode
   - In the Stripe Dashboard, toggle **"Test mode"** in the top-right corner.

2. Create a Product & Price
   - Go to Products → Add product.
   - Name: **Pro Plan**.
   - Pricing: **Recurring** → **Monthly** (set any price you like for testing).
   - Save and copy the **Price ID** (e.g., price_xxx). Keep it safe—you'll need it later.

3. Get Your API Keys
   - Go to Developers → API keys.
   - Copy the **Secret key** (starts with sk_test_…). Keep it safe—you'll need it later.
   - You can also note the **Publishable key** (starts with pk_test_…), in case you use it on the frontend.

4. Add a Webhook Endpoint
   - Go to Developers → Webhooks → Add endpoint.
   - **Endpoint URL**: https://your-domain.com/api/stripe/webhook *(replace with your real domain)*
   - Listen to events:
     - checkout.session.completed
     - customer.subscription.created
     - customer.subscription.updated
     - customer.subscription.deleted
   - Save and copy the **Webhook signing secret** (starts with whsec_…). Keep it safe—you'll need it later.

5. (Optional) Enable the Customer Portal
   - Go to Settings → Billing → Customer portal → Configure.
   - Allow customers to:
     - Cancel subscription
     - Update payment method
     - View invoices
   - Save.

When switching to **Live Mode** later, repeat the same process to get your **live Product**, **live Price ID**, **live Secret key**, and **live Webhook signing secret**.
