Alright, now that we also included the chatting functionality, it's time to adjust some more details:

-First I want a favicon showing up in the browser. Tell me where do add this in my folder structure (I call the file favicon.png) and what to add to all my html pages to always have the favicon showing up.

-Then I also want the following pages:

https://gptsweetheart.com (the landing page)

https://gptsweetheart.com/prices

https://gptsweetheart.com/terms

https://gptsweetheart.com/privacy

-Give me for each new side the html and js if needed.

-Then I want to add a header to all my pages (with exception of redirect), that always looks the same and always contains the logo.png provided on the left side. The header has to contain different links, depending on the page. Also tell me in which folder I have to place the logo.png. Here's what I want the header to contain on different pages:

https://gptsweetheart.com: Logo on the left side, Prices, Sign up, Login on the right side

https://gptsweetheart.com/prices: Logo on the left side, Sign up, Login on the right side

https://gptsweetheart.com/terms: Logo on the left side, Prices, Sign up, Login on the right side

https://gptsweetheart.com/privacy: Logo on the left side, Prices, Sign up, Login on the right side

https://gptsweetheart.com/dashboard: Logo on the left side, Logout on the right out

https://gptsweetheart.com/login: Logo on the left side, nothing else

https://gptsweetheart.com/sign-up: Logo on the left side, nothing else

https://gptsweetheart.com/redirect: no header and footer

-Then I want to add a footer to all my pages as well. The footer should always contain two clickable links (Terms, Privacy) on the right side.

-Give me for each side the suitable html/CSS/JS and tell me where to add it within my existing files.

Here is a description what I want to show up on the new pages:

https://gptsweetheart.com (the landing page)

-A hero section with a title and a subtitle: Title: „CREATE YOUR GPT SWEETHEART IN SECONDS", Subtile: „Create your AI girl and chat with her!"

-A button „Sign up for free" (same design and color like my buttons on the dashboard etc.

-A welcome video (9:16) showing up under the titles and button (tell me where to place the video „welcome.mp4" on my server)

-Three Boxed that contain a Title and image and text each. On desktop next to each other mobile showing up under each other.

-First Box: Title: CHARACTER CREATION, image (called box1.jpg), text: Create your dream ai girl by giving her a name, a bio and of course selecting her look.

-Second Box: Title: SPICY CHATTING, image (called box2.jpg), text: Chat with your girl about whatever you want.

-Third Box: Title: GET IMAGES, image (called box3.jpg), text: See your dream girl how ever you want and get images.

https://gptsweetheart.com/terms

For now, just a title OUR TERMS and after that a placeholder text

https://gptsweetheart.com/privacy

For now, just a title PRIVACY and after that a placeholder text

-Give me back what I have to add to my existing pages and an info where to add that
-Give me the new html pages and their js if needed
-Give me the information I demanded where to put the favicon.png, logo.png, welcome.mp4, box1.jpg, box2.jpg, box3.jpg

-To solve these tasks you don't need my existing pages, as I will manually add the header and footer to the existing pages. Just tell me where to place them. Nevertheless I show you my dashboard.html you see the design I used there. Make sure the same design applies to the new pages.

-I also attach the current folder structure

Take as much time as you need and work as precise as possible. Think step by step.
